

Assignment 1: Good and Bad Design

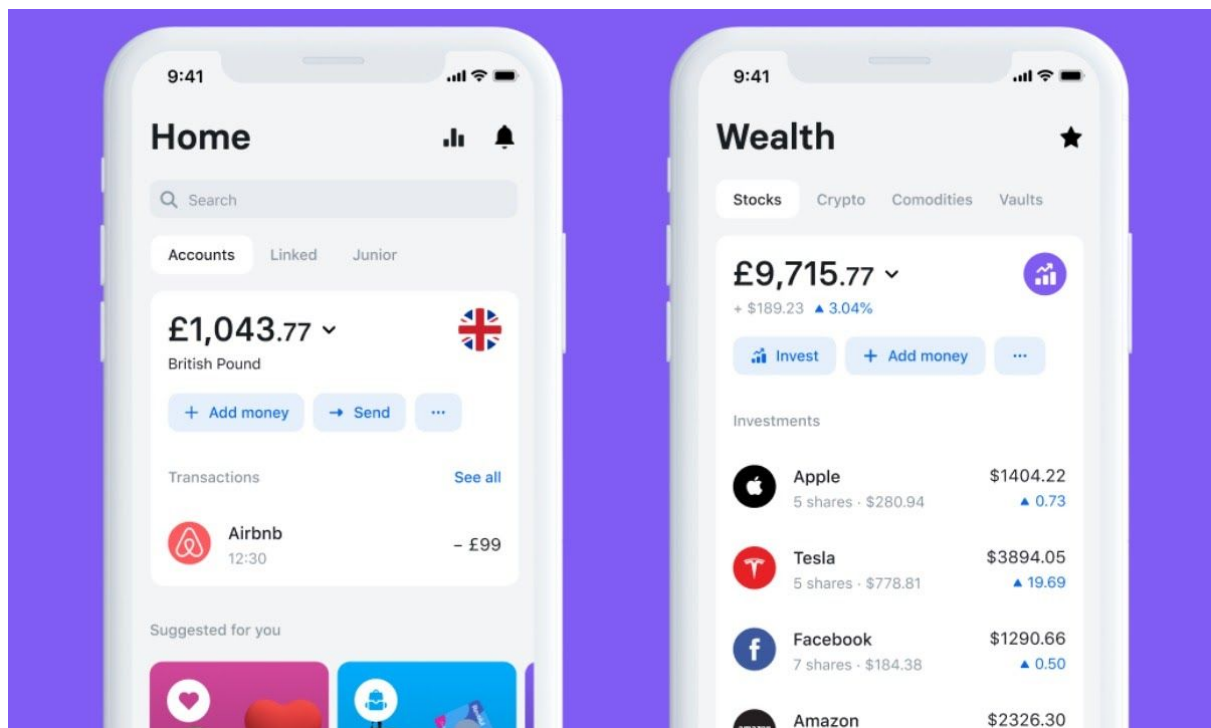

João Reis nº48157

Good Design - Revolut App

Revolut is an emerging digital banking app, which is an alternative to the traditional banks.

This app extends traditional functionalities of banking services, like credit/debit card or digital payments, but also has built-in stock trading, forex trading, crypto trading and the possibility to trade money for gold/silver, making these actions very easy to do.

The app also has a very clean and attractive UI and is user friendly.

Bad Design - WhatsApp delete message feature

This functionality in the most popular cross-platform messaging and VoIP app is poorly designed because when we delete a message we most likely don't want the receiver to know that we sent a message to them, which is not possible in this app because it always appears on both sides that the message was deleted.

To solve this the app should only show this message if the deleted message was already read by the receiver otherwise the App should just delete the message and don't show anything to both sides.
